SportAI FinCast: Ops — Quick Start (US Letter)

1) Requirements
   - Python 3.10+
   - Internet access for first-time dependency install

2) First Run (Mac/Linux)
   - Open terminal and cd into the 'sportai_fincast_ops' folder
   - Run: ./run.sh

3) First Run (Windows)
   - Double-click run.bat (or run from Command Prompt)

What the scripts do:
   - Create a virtual environment (.venv) and install requirements
   - Generate baseline 48h forecasts from sample data
   - Launch the Streamlit dashboard at http://localhost:8501

Workflow Tips:
   - Replace data/*.csv with your SportsKey exports and local signals
   - Re-run 'generate_forecast.py' anytime data updates
   - Use the dashboard 'Generate Suggestions' to write actions_log.csv

Files you may touch:
   - data/events_hourly.csv, signals_hourly.csv, capacity.csv
   - modules/generate_forecast.py (tweak features/horizons)
   - modules/rules_engine.py (edit guardrails & actions)
   - dashboard/app.py (UI toggles + charts)
